CAPABILITIES

- Development of Groundwater Monitoring Wells and Production Wells.
- Techniques include surging, bailing, air lifting, and pumping.
- Pump removal, installation and testing.
- Pump rate tests and drawdown tests.
- Water quality testing and zone aquifer testing.
- Real-time multi-parameter water quality meter with flow cell.
- Water parameters tests include PH, Oxidation Reduction Potential, Dissolved Oxygen, Conductivity, Salinity, Total Dissolved Solids, Seawater Specific Gravity, Temperature, Turbidity (LED), and Water Depth.
- Hydraulic outriggers help ensure rig stability during operation.
- Decontamination Trailer for cleaning pumps and development tooling.
- Trailer equipped with drum rack for containerizing groundwater."
- Generator for pumping in areas without a power source."
